Definitions used	4
Acknowledgements	4
Chapter overview and collaborators	4
Thesis output	4
1 Introduction	4
1.1 Zoonotic infectious diseases	5
1.2 Global change and zoonoses	5
1.3 Zoonoses discovery	5
1.4 West Africa as a hotspot of zoonosis risk	5
1.5 Rodent borne zoonoses	5
1.6 Lassa fever: A case study of a rodent borne zoonosis in West Africa	5
1.6.1 <i>Lassa mammaronavirus</i> and Lassa fever	5
1.6.2 Lassa fever epidemiology	5
1.6.3 Rodent hosts of <i>Lassa mammaronavirus</i>	5

1.6.4	Predicting current and future Lassa fever risk	5
1.7	Aims of the thesis	5
1.7.1	Predicting zoonotic spillover risk in a changing world	5
2	Rodent trapping studies as an overlooked information source for understanding endemic and novel zoonotic spillover	5
2.1	Preamble	6
2.2	Abstract	6
2.3	Introduction	6
2.4	Methods	6
2.4.1	Data sources	6
2.4.2	Host and pathogen trapping data	6
2.5	Analysis	6
2.5.1	What is the extent of spatial bias in the rodent trapping data?	6
2.5.2	Are rodent trapping derived host-pathogen associations present in a consolidated zoonoses dataset?	6
2.6	Results	6
2.6.1	What is the extent of spatial bias in the rodent trapping data?	6
2.6.2	Are rodent trapping derived host-pathogen associations present in a consolidated zoonoses dataset?	6
2.6.3	What is the spatial extent of pathogen testing within a host's range?	6
2.7	Discussion	6
2.8	Summary	6
3	Small mammal species community structures vary importantly by land-use type in a Lassa fever endemic region of Sierra Leone.	6
3.1	Preamble	7
3.2	Abstract	7
3.3	Introduction	7
3.4	Methods	7
3.4.1	Study area	7
3.4.2	Rodent sampling	7
3.4.3	Statistical analysis	7
3.5	Results	8

3.5.1	Rodent occurrence and species assemblage structure	8
3.5.2	Estimating the effect of land use on species occurrence and richness	8
3.5.3	Co-occurrence of rodent species	8
3.6	Discussion	8
3.7	Summary	8
4	Reconstructing rodent contact networks to understand potential routes of <i>Lassa mam-</i> <i>marenavirus</i> transmission.	8
4.1	Preamble	8
4.2	Introduction	8
4.3	Methods	8
4.3.1	Study area	8
4.3.2	Rodent sampling	8
4.3.3	<i>Lassa marmarenavirus</i> serology	8
4.3.4	Statistical analysis	8
4.4	Results	8
4.4.1	<i>Lassa marmarenavirus</i> serology	8
4.4.2	Rodent contact networks	8
4.5	Discussion	8
4.6	Summary	8
5	Discussion chapter.	9
5.1	Contribution to understanding biases in currently available data	9
5.2	Integrating species assemblages into the hazard of zoonotic pathogen spillover	9
5.3	Understanding the epidemiology and risk of Lassa Fever	9
5.4	Future directions	9

Thesis output

1 Introduction

Placeholder

- 1.1 Zoonotic infectious diseases
- 1.2 Global change and zoonoses
- 1.3 Zoonoses discovery
- 1.4 West Africa as a hotspot of zoonosis risk
- 1.5 Rodent borne zoonoses
- 1.6 Lassa fever: A case study of a rodent borne zoonosis in West Africa
 - 1.6.1 *Lassa mammaronavirus* and Lassa fever
 - 1.6.2 Lassa fever epidemiology
 - 1.6.3 Rodent hosts of *Lassa mammaronavirus*
 - 1.6.4 Predicting current and future Lassa fever risk
- 1.7 Aims of the thesis
 - 1.7.1 Predicting zoonotic spillover risk in a changing world
- 2 Rodent trapping studies as an overlooked information source for understanding endemic and novel zoonotic spillover

Placeholder

2.1 Preamble

2.2 Abstract

2.3 Introduction

2.4 Methods

2.4.1 Data sources

2.4.2 Host and pathogen trapping data

2.5 Analysis

2.5.1 What is the extent of spatial bias in the rodent trapping data?

2.5.2 Are rodent trapping derived host-pathogen associations present in a consolidated zoonoses dataset?

2.6 Results

2.6.1 What is the extent of spatial bias in the rodent trapping data?

2.6.2 Are rodent trapping derived host-pathogen associations present in a consolidated zoonoses dataset?

2.6.3 What is the spatial extent of pathogen testing within a host's range?

2.7 Discussion

2.8 Summary

3 Small mammal species community structures vary importantly by land-use type in a Lassa fever endemic region of Sierra Leone.

Placeholder

3.1 Preamble

3.2 Abstract

3.3 Introduction

3.4 Methods

3.4.1 Study area

3.4.2 Rodent sampling

3.4.3 Statistical analysis

3.4.3.1 Rodent occurrence and species assemblage structure

3.4.3.2 Co-occurrence of rodent species

3.5 Results

3.5.1 Rodent occurrence and species assemblage structure

3.5.2 Estimating the effect of land use on species occurrence and richness

3.5.3 Co-occurrence of rodent species

3.6 Discussion

3.7 Summary

4 Reconstructing rodent contact networks to understand potential routes of *Lassa mammaronavirus* transmission.

4.1 Preamble

4.2 Introduction

4.3 Methods

4.3.1 Study area

4.3.2 Rodent sampling

4.3.3 *Lassa mammaronavirus* serology

4.3.4 Statistical analysis

4.3.4.1 How does landuse-, species- and individual-level heterogeneity influence contact networks?

4.4 Results

4.4.1 *Lassa mammaronavirus* serology

4.4.2 Rodent contact networks

4.5 Discussion

4.6 Summary

5 Discussion chapter.

5.1 Contribution to understanding biases in currently available data

5.2 Integrating species assemblages into the hazard of zoonotic pathogen spillover

5.3 Understanding the epidemiology and risk of Lassa Fever

5.4 Future directions
